Experience

Turkish Airlines Technology

Nov 2025 - Present

Data Scientist / AI Engineer · Istanbul / Hybrid

- Design production pipelines over large-scale event data with automated backfills, idempotent processing, schema evolution and performance optimization to deliver reliable analytical and ML-ready datasets.
- Develop reusable ML and explainable AI workflows with leakage-safe feature engineering, model evaluation, automated feature auditing and SHAP-based interpretation.
- Apply hypothesis testing, stratification, sensitivity analysis and model-based diagnostics to distinguish behavioral patterns from measurement and data effects, informing product and engineering decisions.
- Build reproducible data-quality frameworks for instrumentation, schema and methodological checks; document approaches for consistent use across projects and teams.

SPOT

May 2026 - Present

AI Engineer & Founding Partner · Amsterdam / Remote

- Built and shipped an end-to-end basketball video analytics platform, owning data collection, annotation, model training, evaluation, GPU orchestration and production deployment.
- Trained five task-specific models for ball/rim detection, court keypoints, action recognition and jersey-number OCR; developed custom tracking, player identification and trajectory reconstruction.
- Architected distributed GPU inference and integrated the vision backend with a production web application, authentication, database and cloud storage.
- Improved scoring accuracy and consistency while reducing compute requirements; validated on real matches across multiple countries and delivered automatic stats, shot maps and highlight clips.

TÜBİTAK BİLGEM, B3LAB

Aug 2025 - Sep 2025

AI Research Intern · Gebze

- Developed fiscal time-series analysis using U.S. federal expenditure data, stationarity testing, Granger causality, VAR and impulse-response analysis.

Baykar Cezeri AI & Robotics Technologies

Jun 2025 - Aug 2025

AI Engineer Intern - Computer Vision · Istanbul

- Built real-time segmentation, tracking and geometric estimation on NVIDIA Jetson Orin; benchmarked lightweight SAM models with ONNX and TensorRT for edge deployment.

Seller Integral

Sep 2023 - Feb 2025

Data Scientist · Remote

- Built Python data workflows with Pandas, NumPy, scraping, APIs and databases; contributed to image classification and e-commerce automation.

Maestrozon

Jul 2024 - Sep 2024

Data Scientist

- Developed data collection and automation tools for Amazon sellers, making operational workflows accessible to non-technical users.

Schneider Electric

May 2024 - Jul 2024

Data Scientist Intern

- Applied Python, RFM analysis, Power BI and Power Automate to customer analytics, reporting and process automation.

Overtech Information Technologies Inc.

Feb 2022 - May 2023

Computer Vision Engineer · Junior Data Scientist · Data Science Intern

- Built Python/SQL data workflows and worked on TÜBİTAK-supported vision research with custom image datasets, CNN architectures and YOLO detection/classification.

Education

Istanbul Technical University (ITU)

Expected 2026

B.Sc. Artificial Intelligence and Data Engineering · Istanbul, Türkiye
